ADDITIONAL INFORMATION

Projects

MAR 2021 – SEP 2021

Unmanned Aerial Vehicle (Drone)

I took part in the UAV competition branch of a group of students that is participating in the TEKNOFEST International Unmanned Aerial Vehicles Competition 2021. I have also designed the system for our UAV.

NOV 2019 – SEP 2020

Unmanned Aerial Vehicle (Drone) & Model Satellite

We, as a team of students, participated in the TÜBİTAK International Unmanned Aerial Vehicles Competition organized within the TEKNOFEST 2020 organization as well as the TURKSAT Model Satellite Competition organized within the TEKNOFEST 2020 organization.

I worked on developing autonomous movement software for the drone and telemetry software for the model satellite, along with other competition requirements. All the classes and wrappers written for these purposes can be found in this repo: https://github.com/egebilecen/eb-python

FEB 2019 – APR 2020

Unmanned Ground Vehicle

I took part in the software team of an unmanned ground vehicle (UGV) project that a group of students were working on from February 2019 to May 2020. The ground station and UGV's communication, as well as the features for movement and control and image processing, were all written by me. Additionally, since Jetson NANO was being used as the primary controller for this project, I had the opportunity to work with it.

Honours and awards
